SUMMARY

Credit risk and mortgage professional with 6 years of experience in loan underwriting, claims resolution, and loss mitigation. Completed an AI Product Management programme, built and shipped real AI products, and ready to bring financial domain expertise and product thinking into a PM role.

PROJECTS

Swiggy Voice to Order - AI Multilingual Voice Ordering Feature: [View Prototype](#)

- Conducted market analysis and user research revealing that millions of older and non-English speaking users were being left out of food delivery apps entirely - leading to the concept of an AI-powered voice ordering feature built for accessibility.
- Defined the core user journey, mapped feature requirements, and designed success around one outcome - any user placing an order in their own language with zero screen navigation, supported by a clear go-to-market strategy and prioritised feature roadmap.

AskHR - RAG-Based AI HR Policy Assistant

- Spotted that employees were spending hours trying to find HR policy answers on their own - built an AI assistant using RAG architecture that surfaces the right answer instantly from company documents, removing the wait entirely.
- Decided to use a document-based AI approach so answers always come from real company policies, not guesswork - tested the solution end-to-end using a working prototype validated across real HR scenarios.

Flow - Gentle Health Companion (Group Project): [View Prototype](#)

- Discovered through user research and customer journey mapping that people stop health routines not because they stop caring but because exhaustion and too many choices make healthy decisions feel impossible on hard days.
- Shipped a sanctuary-style wellness companion with energy-matched Indian meal suggestions, a judgment-free recovery flow that welcomes users back without guilt, a Win Vault that celebrates every small step, and a clearly defined North Star metric to track engagement.

WORK EXPERIENCE

Senior Representative - Credit Risk Underwriter

Concentrix Bangalore Nov 2024 – Nov 2025

- Reviewed home loan files daily with 95% pre-approval accuracy by evaluating borrower income, assets, and repayment capacity - working directly with brokers to move applications forward cleanly and quickly.
- Noticed a hidden dependency where specific files could only be processed by specific people, causing slowdowns and errors across the team. Mapped the problem, designed a structured calculation tool covering all payslip types, cut processing time by 15 minutes per file, and made every team member capable of handling any file independently.

Mortgage Analyst - Senior Claims Resolution and Loan Origination

Coforge Business Process Solutions Bangalore Nov 2020 – Nov 2024

- Managed a high volume of mortgage and insurance claim files daily with a consistent quality score - coordinated across teams, resolved complex escalations, and ensured every file was closed the same day.
- Noticed recurring patterns in documentation errors during audits, mapped the root cause, and proposed process changes that brought quality scores up and kept them there consistently.

Associate - Loss Mitigation

TSI-Polyplay Bangalore Aug 2019 – Jan 2020

- Worked directly with borrowers facing financial hardship - understood each situation deeply, identified the right resolution path from forbearance to property handover, and ensured every case was handled with both accuracy and care.

Advisor Associate - Technical and Customer Support

(24)7.ai Bangalore Apr 2018 – Jan 2019

- Handled 30+ customer interactions daily with a 93% CSAT score - spotted recurring friction patterns in customer queries and built smarter verification workflows that made the whole team faster.

SKILLS

Product Management: Product Strategy, Product Roadmapping, Product Discovery, Feature Prioritization, Backlog Grooming, Sprint Planning, PRD Writing, North Star Metrics, MVP Definition, Go-to-Market Strategy, Cross-functional Collaboration, Stakeholder Management, Figma

Research & Discovery: User Research, Market Analysis, User Personas, Customer Journey Mapping, Prototype Validation
